Work Experience

Duoke Media

2024.01 - 2024.09

Front-end engineer

- Responsible for the front-end development of the company's advertising screen project, mainly responsible for the front-end development of the PC backend, official website, and mobile terminals.
- Use Vue3 (Options API), TypeScript, and ElementPlus component development. Build with Vite tools.
- Participate in product demand analysis, outline design of product modules, and estimate product development time.
- Coding restores the UI design interface and cooperates with the backend to achieve data interaction.
- Use Git for version control and iteration, separate front-end and back-end architecture, and componentize to improve reuse and maintainability.
- Images, videos and other materials are compressed and uploaded to cloud oss storage to enhance security.
- Complete the project from zero construction to smooth launch and use, and promptly handle functional requirements and problems raised by users.

Wegouer Mall

2018.09 - 2023.12

Front-end engineer

- As a member of the front-end development team, I developed a SaaS e-commerce platform for the company. The project has more than 100,000 active users every day.
- Choose Vue.js as the front-end framework and Ant-design as the UI library.
- Extract common components and encapsulate them into independent component libraries for easy reuse.
- Use responsive layout: Through technologies such as media queries, web pages can adapt to screens and devices of different sizes.
- Performance optimization: Optimize page performance through lazy loading, image compression, etc. Deploy static resources to CDN and use CDN's distributed nodes to accelerate resource loading.

Luban arrives home

2017.03-2018.08

Front-end engineer
